Scoring and Interpreting Practice Exam 1

Now that you've finished Practice Exam 1 and scored your answers, you can examine your results. Did you get all of the questions correct for a particular chapter? That's excellent. You don't need to spend much time going over that topic. Did you answer several questions incorrectly for a particular chapter? Go over that material carefully. You can *roughly* equate your results to an AP test score. To put an approximate AP score on the results of your practice test, follow these steps:

1. Count the number of Section I questions you answered correctly.
Copy this Section I score on the line to the right.
Section I weighted score: _____

2. Using the score rubrics,
 - A. determine your score for Essay 1
 - B. determine your score for Essay 2
 - C. add the scores for Essays 1 and 2
 - D. multiply your essay total by 2.5
 Copy this Section II score on the line to the right.
Section II weighted score: _____

3. Add your scores for Section I and Section II.
Total composite score: _____
4. Since composite score ranges vary from test to test, this is only a very rough estimate. Match your score from #3 with these:

Composite Score Range	Rough Estimate of AP Score
104-150	5
90-103	4
68-89	3
50-67	2
0-49	1
